A Draft Sequence of the Neandertal Genome

From a 45,000 Year-Old Bone

Wilma

Female

Red Hair

Pale Skin

Freckles

How Know What Wilma Looked Like?

Reconstruction by Kennis & Kennis / Photograph by Joe McNally

For the first time, a Neanderthal female peers from the past in a reconstruction informed by both fossil anatomy and ancient DNA. At least some of her kind carried a gene for red hair and pale skin.

Nature, December 30, 2010 (468,1053-1060)

Genetic history of an archaic hominin group from Denisova Cave in Siberia

David Reich^{1,2*}, Richard E. Green^{3,4*}, Martin Kircher^{3*}, Johannes Krause^{3,5*}, Nick Patterson^{2*}, Eric Y. Durand^{6*}, Bence Viola^{3,7*}, Adrian W. Briggs^{1,3}, Udo Stenzel³, Philip L. F. Johnson⁸, Tomislav Maricic³, Jeffrey M. Good⁹, Tomas Marques-Bonet^{10,11}, Can Alkan¹⁰, Qiaomei Fu^{3,12}, Swapan Mallick^{1,2}, Heng Li², Matthias Meyer³, Evan E. Eichler¹⁰, Mark Stoneking³, Michael Richards^{7,13}, Sahra Talamo⁷, Michael V. Shunkov¹⁴, Anatoli P. Derevianko¹⁴, Jean-Jacques Hublin⁷, Janet Kelso³, Montgomery Slatkin⁶ & Svante Pääbo³

Using DNA extracted from a finger bone found in Denisova Cave in southern Siberia, we have sequenced the genome of an archaic hominin to about 1.9-fold coverage. This individual is from a group that shares a common origin with Neanderthals. This population was not involved in the putative gene flow from Neanderthals into Eurasians; however, the data suggest that it contributed 4–6% of its genetic material to the genomes of present-day Melanesians. We designate this hominin population ‘Denisovans’ and suggest that it may have been widespread in Asia during the Late Pleistocene epoch. A tooth found in Denisova Cave carries a mitochondrial genome highly similar to that of the finger bone. This tooth shares no derived morphological features with Neanderthals or modern humans, further indicating that Denisovans have an evolutionary history distinct from Neanderthals and modern humans.

Genetic Engineering Technology Can Combine DNA (Genes) From Different Sources Leading to New Gene Combinations!!

EXPERIMENT

HYPOTHESIS: Biologically functional recombinant chromosomes can be made in the laboratory.

METHOD *E. coli* plasmids carrying a gene for resistance to either the antibiotic kanamycin or tetracycline are cut with a restriction enzyme.

CONCLUSION: Two DNA fragments with different genes can be joined to make a recombinant DNA molecule, and the resulting DNA is functional.

Map of chromosome X

How Can a Single Gene Be Studied?

The Era Of DNA Manipulation Means.....

1. Specific DNA/Genes Can Be Isolated From Any Organism
2. DNA Segments of Any Kind From Any Organism Can Be Combined
3. Isolated Genes Can Be Re-Inserted Into the Chromosomes of Any Organism and Made to Work
4. Genes and Genomes Can Be Synthesized and Made To Work in Any Organism

There Are No Genetic Limits. All Biological Organisms Use the Same Genetic Rules. The Implications Are Enormous!!

"Why" Clone Genes From An Organism's Genome?

1. **PURIFY** Individual Genes From the Genome (e.g., one of 25,000 human genes)
2. **AMPLIFY** The Gene to Obtain Enough DNA For Study
3. **Use the Cloned Gene To:**
 - a) Study Gene Structure & Function (THE Major Use!)
 - b) Use to Convert Cells Into Factories To Make Drugs and Pharmaceuticals
 - c) Use to Diagnose Genetic Diseases
 - d) Use to Identify Individuals (e.g., paternity, forensics)
 - e) Use to Correct Genetic Disease
 - f) Use to Engineer New Crops and Farm Animals
 - g) Synthesize New Genomes and Many Other Uses

Genetic Engineering Has Lead to New Knowledge About How Cells and Genes Function and Has Lead to Applications That Have Improved Our Lives!!

The Age of DNA & Genetic Engineering Has Affected Our Lives in Many Ways

1. Basic Understanding of Living Processes and Ourselves
2. Basic Understanding of Genes and Their Functions
3. The Era of Genomics and the Sequence of the Human Genome and Those of Other Organisms
4. Basic Understanding of Human Diseases Such as Cancer and Novel New Treatments
5. A Multibillion Dollar Biotechnology Industry
6. New Legal Issues Such as Genetic Privacy, Forensics, and Patents on Genes and Genetically Engineered Organisms
7. An New Understanding of Human Origins and the Diversity of Human Populations (e.g., where we come from)
8. New Understanding of the Evolutionary Relationships Between Organisms (e.g., sequence of mammalian genomes, including mouse, human, dog, cat, chimpanzee)
9. Ability to Sequence the Genomes of Extinct Organisms
10. New Ethical Issues in "How Far" We Should Go in Using Genetic Engineering Technology

Genetic Engineering Technology Has Led to Many New Legal and Ethical Issues

1. Patenting Genes, Cells, & Living Organisms?
2. Regulating Experimentation on DNA, Cells, Transgenic Organisms ("GMOs")?
3. Regulating the Release of Genetically Modified Organisms into the Environment?
4. Labeling of Genetically Modified Foods?
5. Genetic Testing: DNA Databases, Newborn Genetic Screening, Genetic Privacy, Involuntary or Voluntary Testing?
6. Genetic Discrimination?
7. Genetic Enhancement and Eugenics: Right to Enhance Your Child?
8. Gender Selection and Prenatal Diagnosis of Genetic Diseases?
9. Gene Therapy: Correcting Human Genetic Diseases?
10. Human Cloning and Genetic Improvement?
11. Gene Testing Companies (e.g., 23andMe): Liability?
12. Synthetic Genomes: Constructing New Organisms?

What Do These **Genetic Engineering** Experiments "Say" About the Unity of Genetic and Biological Processes?

What is the Hypothesis?

What are the Predictions?

What Experiment(s) to Test Predictions?

What Can We Infer FROM These Genetic Engineering Experiments About How Genes “Work” and Genetic Processes in All living Organisms?

1. *Genes Can Work Independently of Other*
2. *Basic Genetic Processes Are Universal (Replication & DNA to RNA to Protein)*
4. *Basic Genetic Processes Can Be Used to Engineer or Transfer Genes From One Organism to Another and Transfer Them Stably Generation After Generation*

Observations and Inferences From the GloGene Experiments

- 1. Genes Can Work Independently of Each Other - The Jellyfish Fluorescence Gene Works Perfectly in a Variety of Organisms*
- 2. Basic Genetic Processes Are Universal (Replication & DNA to RNA to Protein) - The Jellyfish Gene Directs the Production of Fluorescence Protein That Glows in the Cells of a Variety of Organisms.*
- 5. Basic Genetic Processes Can Be Used to Engineer or Transfer Genes From One Organism to Another and Transfer Them Stably Generation After Generation - The Jellyfish Gene Can Be Used To Engineer a Variety of Organisms That Glow and That Are Inherited Generation After Generation.*

Translating The Genetic Code Into Proteins is a Conserved Process

*Can Intervene
in This Process in
Cells*

*Genetic Engineering
Is not "Hocus Pocus."
It Uses "Natural"
Cell Processes!!!!*

*All Organisms Use
The SAME Processes
And "RULES" to
Generate Traits!! And
The SAME Molecules
& Chemistry!!*

Cloning: Ethical Issues
and Future Consequences

Plants of Tomorrow

It Has Lead to Civilization and Culture as We Know It!

- Agriculture
- Medicine
- Computers and Automation
- Airplanes, Cars, and Satellites
- Countries and Cities
- Political Systems
- Art and Literature
- Etc., Etc., Etc.

Simply Put:Our Way of Life!

Is Genetic Engineering a New Technology?

There is Nothing New About Genetic Engineering!

**Manipulating Genes is Manipulating Genes No Matter
What Technology or Processes Are Used!!**

**Breeding And Cultivation Of Plants
Have Taken Place Over Thousand Of Years**

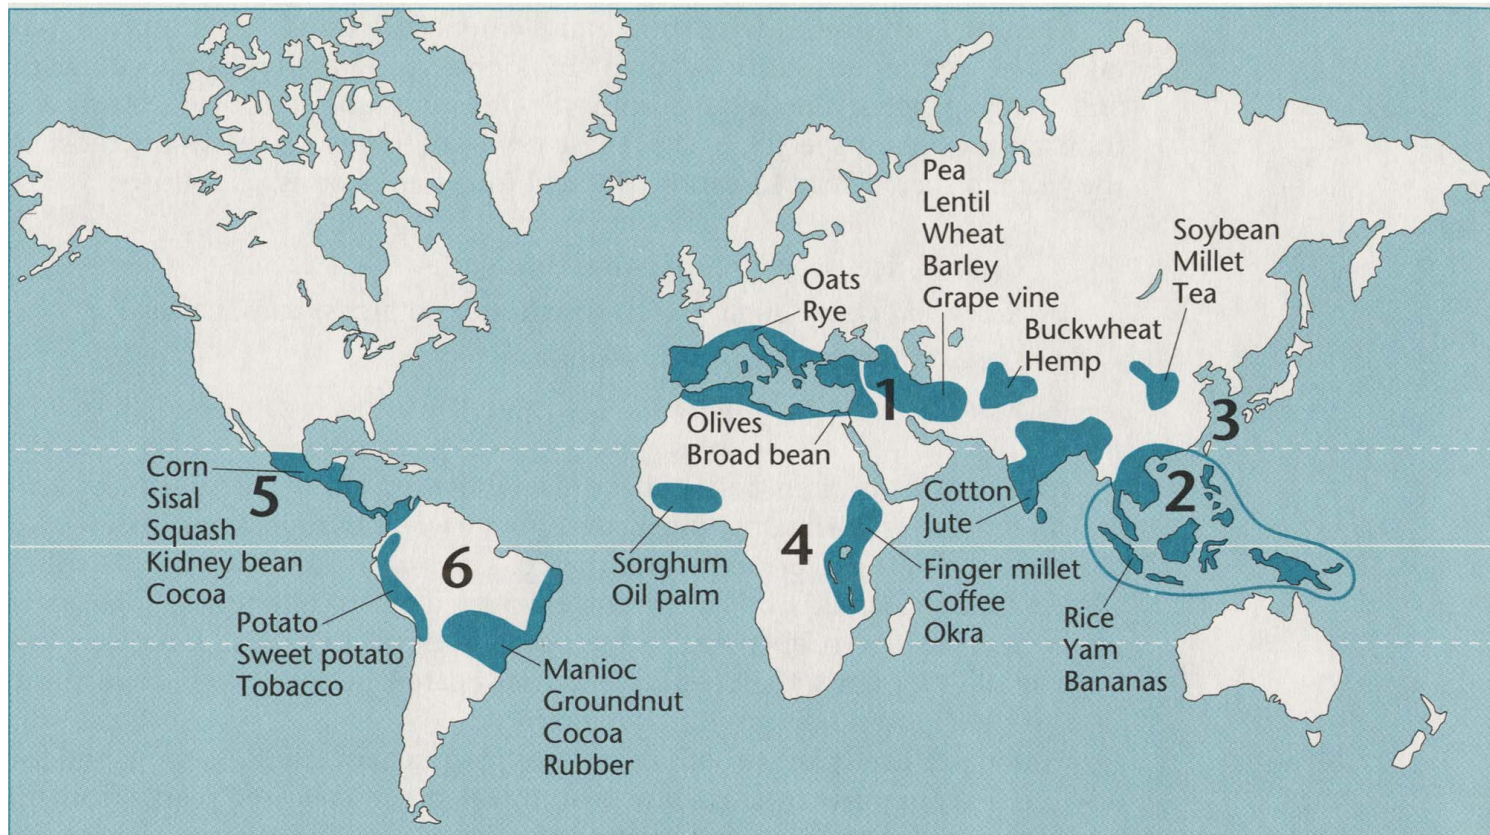

Genetic Engineering is Not New

Crops of Egypt 400 B.C.

Most Major Crops Were Engineered From Wild Relatives by Early "Bioengineers" Over 10,000 Years Ago!!

Regions Where Major Crops Were Established

Breeding Involves Gene Manipulation Using EXISTING Genetic Variability!

Breeding Uses Natural Genetic Variability of Genes As Raw Material - Variability Generated by Mutations

*Mutations in a Gene That Change Its Chemical Sequence
& Slightly Alters Its Function (e.g., fruit size, color)*

*Tomatoes Were Engineered From Small Wild Relatives
Because of Mutations in Fruit Size Genes!*

*The Early Tomato "Bioengineers" Selected For Large
Fruit Size Because it Provided More Food!*

What They Were Selecting Was a Different Form (Allele) of a Fruit Size Gene!

Engineering Teosinte Into Domesticated Corn

Note: *Architecture and Fruit (cob) Size*

*Only Five Genes Cause These Plants to Differ
& We Now Know What They Are*

**Breeders Have Selected For
Variability In Plant Control Genes To
Generate Novel Crops**

How Are These Plants Related?

Engineered For Regulatory Genes!! Genes That Have Been Identified!!

**Farm Animals Were Also “Engineered” By
Breeding Wild Relatives
Cattle Breeding in Egypt 4,000 Years Ago!**

**Manipulating Existing Genetic Variability
Brought About By Chance Mutations!**

Even Domesticated Pets Were “Engineered” By Breeding Wild Relatives

NEWS & VIEWS

GENOMICS

The dog has its day

Hans Ellegren

Domestication and selective breeding have transformed wolves into the diversity of dogs we see today. The sequence of the genome of one breed adds to our understanding of mammalian biology and genome evolution.

The Dog Genome Has Been Sequenced!

Canine DNA
Forensic Testing

The Problem With Breeding the “Old Fashioned Way”

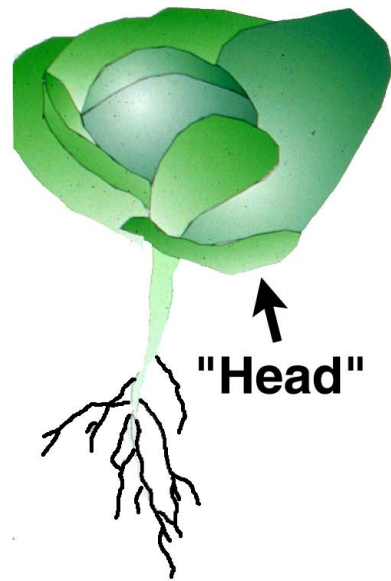

Cannot Predict Results!

The Problem With Breeding the "Old Fashioned Way"

Engineering A Novel Crop By "Wide" Breeding

Cabbage (*Brassica*)

Radish (*Raphanus*)

Engineering A Novel Crop By "Wide" Breeding

*Results Show the Unpredictability of Classical Breeding Approaches
Compare With the Modern Genetic Engineering Examples Shown Previously*

Genetic Engineering is a Technique!

**How Do Classical Genetic Engineering
Methods Differ From Those Using
DNA and 21st Century Technologies?**

Classical vs. Molecular Genetic Engineering

TRADITIONAL PLANT BREEDING

PLANT BIOTECHNOLOGY

Biotechnology Adds A Single Gene

What Are The Limitations of Classical Breeding/Genetic Engineering?

1. Limited To Genes of Interbreeding Organisms and Severe Ethical Issues With Humans
2. Only Can Make New Combinations of EXISTING Genes - Genes Created By "Natural" Mutations
3. Can't Make Existing Genes "Better" - Just Better or More Useful Combinations of Existing Genes and/or Alleles
4. Takes Time - Limited To Generation Time of Organism - Decades For Some Crop Plants
5. Only Useful For "Obvious" Traits - One's That Can Be Observed or Followed

What Are The Advantages of Using 21st Century Genetic Engineering Methods?

1. Any Gene From Any Organism Can Be Used In Any Organism - There Are No Breeding Barriers (e.g., genes of all sequenced genomes)
2. New Genes Can Be Engineered - Genes That Work Better and/or Produce New Proteins (i.e., create new genetic variability and/or alleles)
3. Existing Genes Can Be Engineered to be Switched On in "Places" That They Are Normally Off - Gene Control or Regulation Altered (e.g., fly eye on leg)
4. Speed - Can Engineer a New Organism in a Generation
5. Can Change, Alter, Manipulate, Synthesize and/or Control the Genetic Blueprint of Any Organism

The Era of 21st Century Genomics Will Enable Us To Have Access to ALL Genes of Every Organism of the Earth

The Genomes of Many Organisms Have Been Sequenced Providing New Knowledge About Our Origins and Cellular Functions

The Future is Unlimited!

Providing Thousands of New Genes and Proteins To Be Engineered For Practical Applications (e.g., cellulases in termite gut bacteria for biofuel production)

Discussion Tomorrow

- **Recombinant DNA Debate**
 - *The Manipulation of Genes*
 - **Berg Biohazard Letter**
-
- **Read Papers Handed Out Today & Textbook Chapters 1-3**
-
- **Be Prepared for a Discussion of the History & Science of Genetic Engineering Providing the Foundation**

Plants of Tomorrow

- **Come PREPARED!!!!**
- **Read Articles Carefully Prior to Discussion**
- **What's the Question, the Approach, the Results, the Conclusions?**
- **Study Each Figure/Experiment/Legends-Ask The Same Questions!**
- **Read Relevant Parts of Text That Relate to Concepts Covered in Articles**
- **Read Articles ACTIVELY -Look Up Unknown Words/Concepts - Ask Yourself Questions Along the Way - What Does This Mean?!**
